

A SECURE TECHNOLOGY COMPANY

Quality Assurance Policy Lark Engineering Co.

This statement of Lark Engineering's management policy includes philosophy, organization, and responsibility for quality assurance of deliverable filters manufactured by Lark Engineering Co.

Lark Engineering is dedicated to the planning and implementation of all the functions and actions required to satisfy contractual obligations. The design and manufacturing of quality products is one of the most important of these.

Each member of Lark Engineering's management, through his/her decisions and actions, strives to create and maintain an atmosphere indicating that the quality of products is the first order of importance to Lark Engineering and is the responsibility of all employees.

The Quality Assurance Department has the responsibility and authority to assure company management and its customers that all of Lark Engineering's products are in accordance with, or exceed, specification requirements in all respects. This is accomplished through the use of such tools and functions as engineering and planning; receiving, in-process fabrication, assembly and test inspection, testing during alignment and final product levels, control of special process and raw material, the implementation of effective failure and discrepancy analysis, and corrective action procedures.

The authority is vested in the Quality Assurance Department to reject any item that does not meet specification requirements; to stop any process until fully corrected and to impound materials and equipment not compliant with Lark Engineering's quality standards. The manager of Quality Assurance is the final authority, within Lark Engineering, to determine whether a product meets customer requirements, Lark Engineering's quality standards, and if the product is acceptable for delivery to the customer.

Alfonso Martinez
President of Manufacturing Operations
